Contents

<i>Preface</i>	vii
Introduction: Generation of Wavefields using Diffractive Optical Elements (DOEs)	1
1 Parametric Methods of Computing DOEs	11
1.1 Error reduction algorithm	11
1.2 Adaptive-additive algorithm	15
1.3 Adaptive-multiplicative algorithm	26
1.4 An algorithm for extrapolating and interpolating the DOE phase	32
2 Iterative Algorithms for Calculating DOEs Forming Radially Symmetrical Images	41
2.1 Calculation of DOEs forming radially symmetric diffraction patterns	42
2.2 Calculation of DOEs-axicons	47
2.3 Calculation of radially symmetric DOEs with quantized phase	51
3 Iterative Algorithms for Calculating Wavefront Formers	61
3.1 Computation of phase formers of wavefronts	61
3.2 Amplitude transparencies for forming wavefronts	64
4 Calculation of Phase Formers of Light Modes	71
4.1 Bessel mode formers	71
4.2 Formers of Bessel quasimodes	79
4.3 DOEs for the formation of Gaussian modes	82

5	Design of Multiorder Diffraction Gratings with a Pregiven Intensity of Diffraction Orders	95
5.1	Gradient method with analytical initial approximation for multiorder binary gratings design	95
5.2	Iterative calculation of multilevel phase diffraction gratings	104
6	Iterative Methods for Calculating Multifocus DOEs	115
6.1	Multifocus focusators	116
6.2	Multifocus zone plates and nonlinear combined effects diffractive elements	127
6.3	Diffractive multifocus lens	136
6.4	Computation of two-order DOEs	143
7	Calculation of DOEs for Some Special Applications	147
7.1	Focusing into a transverse line segment	147
7.2	Focusing of Gaussian beam into a square	157
7.3	Focusing into a ring	164
7.4	Focusing into an axial segment	174
	Conclusion	189
<i>Appendix A</i>	Proof of convergence of the adaptive-additive algorithm	191
<i>Appendix B</i>	Proof of convergence of the algorithm for computing phase formers of wavefronts	195
<i>Appendix C</i>	Proof of convergence of the algorithm for calculating amplitude transparencies for the formation of wavefronts	199
<i>Appendix D</i>	Proof of convergence of the algorithm for computing formers of Bessel modes	201
<i>Appendix E</i>	Proof of convergence of the algorithm for calculating formers of orthogonal modes	205
<i>Appendix F</i>	Iterative design of DOEs modulating the coherent light polarization	209
<i>Appendix G</i>	Iterative design of reflection diffraction gratings using the Kirchhoff-Beckmann and Rayleigh approximations	219
	<i>References</i>	231
	<i>Index</i>	241
