

Service-Oriented Computing: Semantics, Processes, Agents

Munindar P. Singh Michael N. Huhns

July 30, 2004

Contents

I	Basics	1
1	Computing with Services	3
1.1	Visions for the Web	4
1.1.1	Semantic Web	4
1.1.2	Peer-to-Peer Computing	5
1.1.3	Processes and Protocols	5
1.1.4	Pragmatic Web	6
1.2	Precursors	6
1.3	Open Environments	8
1.3.1	Autonomy	8
1.3.2	Heterogeneity	9
1.3.3	Dynamism	10
1.3.4	Challenges	10
1.4	Services Introduced	11
1.5	The Evolving Web	13
1.6	Standards Bodies	14
1.7	Overview of this Book	16
1.8	Notes	18
1.9	Exercises	18
2	Basic Standards for Web Services	19
2.1	XML	21
2.2	SOAP	21
2.2.1	Processing	23
2.2.2	Body and Header	24
2.2.3	Faults	25
2.2.4	Message Exchange	25
2.2.5	Limitations	26
2.3	WSDL	27
2.3.1	Concepts	29
2.3.2	Operation Types	30

2.3.3	Creating WSDL Models	30
2.4	Directory Services	31
2.5	UDDI	32
2.5.1	Conceptual Model	32
2.5.2	UDDI APIs	37
2.6	Notes	44
2.7	Exercises	44
3	Programming Web Services	51
3.1	Representational State Transfer	51
3.2	SOAP and REST	56
3.3	Developing and Using Web Services	57
3.3.1	Programming WSDL	57
3.3.2	Java for Web Services	59
3.3.3	.NET	60
3.4	Web Services Interoperability	60
3.5	Notes	61
3.6	Exercises	61
4	Enterprise Architectures	63
4.1	Enterprise Integration	63
4.2	J2EE	65
4.3	.NET	67
4.4	Model-Driven Architecture	68
4.5	Legacy Systems	69
4.6	Notes	70
4.7	Exercises	71
5	Principles of Service-Oriented Computing	73
5.1	Use Cases	74
5.1.1	Intraenterprise Interoperation	75
5.1.2	Interenterprise Interoperation	76
5.1.3	Application Configuration	76
5.1.4	Dynamic Selection	77
5.1.5	Software Fault Tolerance	77
5.1.6	Grid	78
5.1.7	Utility Computing	78
5.1.8	Software Development	78
5.2	Service-Oriented Architectures	78
5.2.1	Elements of Service-Oriented Architectures	79
5.2.2	RPC versus Document Orientation	80
5.3	Major Benefits of Service-Oriented Computing	81
5.4	Composing Services	81

5.4.1	Goals of Composition	82
5.4.2	Challenges for Composition	83
5.5	Spirit of the Approach	85
5.6	Notes	86
5.7	Exercises	86

II Description 87

6 Modeling and Representation 89

6.1	Modeling to Enable Interoperation	90
6.2	Integration versus Interoperation	91
6.2.1	Declarative versus Procedural Representations	92
6.2.2	Interoperation	92
6.2.3	Layered View	93
6.2.4	Interoperation Trends	94
6.3	Common Ontologies	95
6.3.1	Ontologies: A Definition	96
6.3.2	A Shared Virtual World	96
6.3.3	Dimensions of Abstraction	98
6.3.4	Value Maps	100
6.4	Knowledge Representations	104
6.4.1	Relationships Represented	105
6.4.2	Frames versus Descriptions	105
6.4.3	Ontology Language Features	106
6.5	Elementary Algebra: Relations	108
6.6	Hierarchies	110
6.6.1	Taxonomy	110
6.6.2	Meronomy	110
6.7	Modeling Fundamentals	110
6.7.1	Perspectives for Conceptualization	112
6.7.2	Guidelines for Conceptualization	112
6.7.3	Modularity and Extensibility	113
6.8	UML as an Ontology Language	115
6.9	Alternative Terminology	117
6.10	Notes	117
6.11	Exercises	117

7 Resource Description Framework 121

7.1	Motivation for RDF	122
7.2	RDF Basics	124
7.2.1	Resources	124
7.2.2	Literals	124

7.2.3	Properties	124
7.2.4	Statements	125
7.3	Key Primitives	125
7.3.1	Containers and Collections	126
7.3.2	Reification	127
7.3.3	Information Model	127
7.4	XML Syntax	128
7.5	The N-Triples Notation	130
7.6	Storing RDF	130
7.7	RDF Schema	131
7.8	Vocabularies in RDF Schema	133
7.9	Notes	133
7.10	Exercises	133
8	Web Ontology Language	139
8.1	Getting Started with OWL	140
8.2	OWL Dialects	142
8.3	OWL Constructors	143
8.3.1	Classes	143
8.3.2	Properties	144
8.3.3	Class Expressions	145
8.3.4	Collections	150
8.4	OWL Axioms	150
8.4.1	Individuals	151
8.4.2	Data Values	152
8.4.3	Classes	152
8.4.4	Properties	153
8.4.5	Elementary Algebra: Functions	154
8.5	OWL Inference	154
8.6	OWL Dialects Compared	156
8.7	An OWL Example	158
8.8	Expressiveness	160
8.8.1	Tree Model Definitions	160
8.8.2	Constraints among Individuals	161
8.8.3	Specialized Properties	162
8.8.4	Defeasible Concepts	162
8.9	Notes	163
8.10	Exercises	163

9	Ontology Management	167
9.1	Language-Based Representations	168
9.2	Standard Ontologies	168
9.2.1	Universal Business Language	168
9.2.2	Cyc	169
9.2.3	IEEE Standard Upper Ontology	169
9.3	Standardization versus Semantic Reconciliation	170
9.4	Consensus Ontologies	172
9.4.1	Analysis	172
9.4.2	Reconciling Ontologies	173
9.4.3	Correctness versus Relevance	176
9.5	Ontology Imports and Versioning	178
9.6	Notes	179
9.7	Exercises	179
III	Engagement	181
10	Execution Models	183
10.1	Basic Interaction Models	184
10.2	Messaging	186
10.3	CORBA	186
10.4	Peer-to-Peer Computing	191
10.4.1	Going Beyond Client-Server	191
10.4.2	Models of P2P Computing	192
10.5	Jini	192
10.6	Grid Computing	194
10.7	Notes	196
10.8	Exercises	196
11	Transaction Concepts	199
11.1	Transactions	200
11.1.1	ACID Properties	202
11.1.2	Schedules	202
11.1.3	Locking	208
11.1.4	Distributed Transactions	210
11.2	Transactions over Composed Services	215
11.2.1	Architecture for Composed Services	215
11.2.2	Properties of Composed Transactions	217
11.2.3	Difficulty with Compositional Serializability	218
11.2.4	Achieving Compositional Serializability	219
11.3	Limitations of Traditional Transactions	222
11.4	Relaxing Serializability	223

11.5	Extended Transaction Models	224
11.5.1	Sagas	226
11.5.2	Flex Transactions	226
11.5.3	DOM Transactions	227
11.6	Notes	227
11.7	Exercises	227
12	Coordination Frameworks for Web Services	233
12.1	WSCL: Web Services Conversation Language	235
12.2	WSCI: Web Service Choreography Interface	240
12.3	WS-Coordination: Specifying Coordination	242
12.3.1	Coordination Service	243
12.3.2	Activation Service	245
12.3.3	Registration Service	247
12.4	Web Service Transaction Types	249
12.5	BTP: Business Transaction Protocol	251
12.6	Notes	251
12.7	Exercises	253
13	Process Specifications	255
13.1	Processes	256
13.2	Describing Dynamics with UML	257
13.3	Workflows	259
13.3.1	Exceptions	260
13.3.2	Workflow Interoperability	262
13.3.3	A Metamodel for Workflow	263
13.3.4	Interoperation	264
13.3.5	State of the Art	266
13.3.6	Challenges Facing Workflow Technology	266
13.4	Business Process Languages	267
13.4.1	BPEL4WS	267
13.4.2	BPML	273
13.4.3	ebXML	274
13.4.4	RosettaNet	284
13.5	The Process Specification Language	286
13.6	Notes	289
13.7	Exercises	290
14	Formal Specification and Enactment	293
14.1	Scheduling with Dependencies	295
14.2	Specifying Service Composition	296
14.2.1	Coordination Relationships	299
14.2.2	Example Scenario	300

14.3	Residuation	300
14.4	Symbolic Calculation of Residuals	302
14.5	Distributed Scheduling	303
14.5.1	Temporal Logic for Internal Reasoning	304
14.5.2	Deriving Guards from Specifications	306
14.5.3	Scheduling with Guards	307
14.6	Formalization	308
14.6.1	Evaluating Guards	308
14.6.2	Simplification	309
14.6.3	Formalizing Event Classes	311
14.7	Discussion	312
14.8	Notes	313
14.9	Exercises	314

IV Collaboration 317

15 Agents 319

15.1	Agents Introduced	320
15.2	Agent Environments	321
15.3	Agent Descriptions	323
15.3.1	Reasoning	324
15.3.2	Internal Architectures	325
15.4	Abstractions for Composition	328
15.5	Describing Compositions	330
15.5.1	Representing and Reasoning about Action	331
15.5.2	OWL-S	331
15.6	Composition as Planning	338
15.7	Rules	339
15.7.1	Applying Rules	340
15.7.2	Kinds of Rules	341
15.7.3	Jess	344
15.7.4	SWRL: Semantic Web Rule Language	345
15.7.5	Complexity and Expressiveness	347
15.7.6	Negation, Nonmonotonicity, Priorities	347
15.8	Notes	349
15.9	Exercises	349

16 Multiagent Systems 353

16.1	Applicability in Service-Based Systems	355
16.2	Multiagent Architecture	356
16.3	Agent Types	357
16.4	Life Cycle Management for Agents and Multiagent Systems	359

16.5	Consistency Maintenance	362
16.5.1	Truth Maintenance Concepts	363
16.5.2	Multiagent Truth Maintenance	364
16.5.3	Consistency Maintenance for a Long-Lived Service	365
16.5.4	Conflicts among Agents	365
16.6	Modeling Other Agents	366
16.7	Cognitive Concepts	370
16.8	Notes	371
16.9	Exercises	372
17	Organizations	375
17.1	Contracts	376
17.1.1	Legal Concepts	376
17.1.2	Deontic Logic	378
17.1.3	Commitments	379
17.2	Spheres of Commitment	382
17.2.1	Teams of Services	382
17.2.2	Virtual Enterprises as Teams	383
17.3	Achieving Collaboration via Conventions	383
17.4	Policies	386
17.5	Negotiation	386
17.5.1	Negotiation Protocols	387
17.5.2	Negotiation Fundamentals	389
17.5.3	Requirements for a Negotiation Language	391
17.6	Exercises	393
18	Communication	397
18.1	Agent Communication Languages	398
18.1.1	Speech Act Theory	398
18.1.2	Semantics	399
18.1.3	Interaction Patterns	400
18.1.4	Combining ACLs with Web Services	401
18.2	Contract Net Protocol	401
18.3	Business Protocols	404
18.3.1	Compiling Business Protocols	407
18.3.2	Compliance with Business Protocols	407
18.4	Notes	412
18.5	Exercises	412

V	Selection	415
19	Semantic Service Selection	417
19.1	Semantic Matchmaking	418
19.1.1	Applying Ontologies	418
19.1.2	Requirements for an Advertising and Matchmaking Language	420
19.1.3	Selecting Services	420
19.2	SoCom Matchmaking	421
19.3	Exercises	422
20	Social Service Selection	425
20.1	Reputation Mechanisms	426
20.2	Recommender Techniques	427
20.2.1	Model-Based Approaches	428
20.2.2	Memory-Based Approaches	428
20.2.3	Challenges for Recommender Approaches	428
20.2.4	Products versus Service Recommendations	429
20.3	Referrals	429
20.3.1	Adaptive Treatment of Referrals	430
20.3.2	Advantages of Referrals	431
20.3.3	Evaluation	431
20.4	Social Mechanism for Trust	431
20.4.1	Empirical Basis	432
20.4.2	Local Belief Ratings	432
20.4.3	Combining Evidence	433
20.4.4	Gathering Opinions	434
20.5	Identity	435
20.6	Exercises	435
21	Economic Service Selection	437
21.1	Market Environments	438
21.2	Auctions for Services	440
21.2.1	Types of Auctions	440
21.2.2	Online Auctions	441
21.2.3	Agent Economies	442
21.3	Exercises	445
VI	Engineering	447
22	Building SOC Applications	449
22.1	Elements of SOC Design	450
22.2	Quality of Service	451

22.3	How to Create an Ontology	453
22.3.1	Ontology Construction	453
22.3.2	Ontology Guidelines and Conventions	455
22.4	How to Create a Process Model	457
22.5	How to Design Agent-Based Systems	458
22.5.1	Engineering Cooperation	459
22.5.2	Diversity versus Complexity	460
22.6	How to Construct Agent-Based Systems	462
22.7	How to Engineer Composed Services	462
22.8	Exception Handling	464
22.9	Knowledge Management Applications	467
22.9.1	Agent-Based Knowledge Network	468
22.9.2	Intranet Portals	469
22.9.3	Communities of Practice	469
22.10	eBusiness Applications	470
22.10.1	Business Models for eBusiness Applications	471
22.10.2	eMarketplace Architectural Requirements	472
22.11	Application to Supply-Chain Automation	474
22.12	Exercises	474
23	Service Management	481
23.1	Enterprise Resource Planning	482
23.2	WS Management Framework	483
23.3	WS Distributed Management	484
23.3.1	Contingency Plans for Service Failures	485
23.3.2	Security and Authentication	485
23.3.3	Features and Benefits of WSDM Centralization	485
23.4	Metadata Protocols	486
23.5	Scalability	486
23.5.1	Scalability in Practice	486
23.5.2	Scaling Infrastructure Services for Agents	487
23.5.3	Scalability Experiments	487
23.5.4	Long-Lived Adaptable Agents	488
23.6	Robust Services via Agent-Based Redundancy	489
23.6.1	Architecture and Process	490
23.6.2	Experimental Results	491
23.7	Exercises	491
24	Security	493
24.1	Securing Web Services	494
24.1.1	Nonrepudiation	494
24.1.2	Endorsement	495
24.1.3	Certificates	495

24.2	SAML and WS-Security	496
24.3	WS-Trust	497
24.4	XACML: eXtensible Access Control Markup Language	498
24.5	Reasoning about Security Policies	499
24.6	Privacy	500
24.7	Exercises	500
VII	Directions	503
25	Challenges and Extensions	505
25.1	Trust	505
25.2	Ethics	507
25.2.1	Machine Ethics	508
25.2.2	Applying Ethics	509
25.2.3	Ethical Violations	509
25.3	Coherence	510
25.4	Benevolence	511
25.5	Network Architecture	512
25.6	Managing Privacy	512
25.7	Key Challenges and Recommendations	513
VIII	Appendices	515
A	XML and XML Schema	517
A.1	Why XML?	517
A.2	XML	519
A.2.1	XML and Vocabularies	521
A.2.2	Transforming XML	521
A.2.3	Well-Formedness	522
A.2.4	Namespaces and Qualified Names	523
A.2.5	Using Entities	524
A.2.6	XML Extensions	525
A.3	XML Schema	526
A.4	Limitations	528
A.5	Notes	529
A.6	Exercises	529
B	URI, URN, URL, and UUID	533
C	XML Namespace Abbreviations	535

D	Glossary	537
E	About the Authors	541
	Bibliography	543
	Index	553
